

Advantages of the RadFazz bicycle rack system

- **Protects the bicycles** stored in the rear garage against theft, vandalism and soiling
- **Can be independently installed** in the motorhome rear garage – simply screw into the lashing rails installed as standard
- **No additional bores/holes** are required for assembly
- **The bicycles are easily fastened into place** – the bicycle is fastened to the RadFazz bicycle rack via the bicycle fork and secured by a strap
- **Flexible system – suitable for all** conventional bicycle types such as electric bikes, racing bikes, mountain bikes, etc.
- **Replaceable bushings** for quick release skewers and 12 mm / 15 mm quick-release axles **included as standard** – meaning that you are equipped for future bicycle purchases
- **Low payload** – the bicycle rack dead weight for two bicycles is approx.2,3 kg
- Dimensions – **only requires a very small amount of space**
- The **vehicle length** remains **unaltered** despite assembly
- **“Made in Germany”** – premium quality

Advantages of the RadFazz bicycle rack system

- **The fork mount is the core of the system:**

Each bicycle is fastened into place on the fork holder via its front wheel fork. This is the only method that ensures a space-saving transportation of the bicycle in the vehicle. Almost all types of bicycle such as racing bikes, mountain bikes and /or e-bikes can be fastened to the fork mount.

We supply this type of fork mount complete with quick release skewer. If changing bicycle (e.g. new purchase or loan bike) means that you have to deal with a different type of axle installation, the fork mount can be converted accordingly with the changeable bushings included as standard.

- Further accessories such as the wheel holder are optionally available and can easily be retrofitted at any time.
