

HYMER Campervan Pop-Top Roof Insulation Care and Assembly Instructions

Scope of delivery:

4-part insulation set

1 roll of Velcro tape with self-adhesive backing

The insulation set is assembled in the vehicle interior. The pop-top roof can be closed when the insulation has been assembled. Slots are present in the side sections in order to be able to see the red pull loops belonging to the tent bellow whilst performing the assembly.

This 4-part pop-top roof set is a sandwich concept. A velour material in anthracite which provides a homely atmosphere faces towards the interior and a white, breathable TYVEK material faces towards the outside. 10 mm thick insulation, which noticeably insulates against the cold, is located between these two materials.

CARE INSTRUCTIONS:

If the insulation becomes dirty, the velour material can be cleaned with a damp cloth and, if necessary, a small amount of detergent.

INSTALLATION INSTRUCTIONS:

- Apply the self-adhesive hook fastener (the counterpart to the fleece band) along the respective bottom edges of the insulating elements. Circumferentially apply the self-adhesive hook fastener (the counterpart to the fleece band) on to the lower frame of the pop-top roof
- All 4 insulating elements are marked with the respective position information and can be applied directly to the roof lining with the sewn-on hook fastener. Start by assembling the front section. Ensure that it is aligned centrally. The front section can be opened via 2 zips in order to let in light and fresh air.

- The next part to be assembled is the rear section. This section is installed in the same way as the front section.

- In order to assemble the side sections for the driver or passenger side, first connect the respective side section with the rear section. The side section is also assembled to the roof lining via the sewn-on hook fastener.

- Then connect the side section with the front section.

- Each of the side sections are equipped with slots in order to guide the red control loops through the pop-top roof.

MATERIAL:

Upper material:	100% polyester
Intermediate material:	100% polyester
Lining material:	100% HDPE spun-bonded fabric

Part number: 2328897
