

HYMER Dog lead flex & leash

The HYMER dog lead is wound around the table leg which is screwed onto the floor and features a secure fastener at the end which can be snapped into the dog harness.

Simply wind the lead around the table leg and pass the fastener through the loop.

You can now pull the lead tight.

To shorten the lead, wind it around the table leg a second time and pass the fastener through the loop again. That way you can increase or decrease the length as required.

Warning: The dog lead should not be used as a substitute for a transit box and does not offer adequate protection according to the highway code.
